We are in search of a PA candidate for a position in an orthopedic practice. I am an orthopedic surgeon with a fellowship in foot and ankle as well as joint replacement. My practice is concentrated around both primary and revision type joint replacement surgeries. The ideal candidate would be interested in a specialized practice, would embrace independence in the outpatient setting, and would be interested in complex surgical cases. On the surgical side, I am looking for someone who is interested in problem-solving in difficult cases and is interested in contributing to the outcome not just closing wounds. I am in a large orthopedic practice that is single specialty and independent from the hospitals, and currently employs four other physician assistants. I am constantly looking to add new technology and innovative techniques to my practice, and would require that the PA would be interested in constantly upgrading and innovating as well. Call responsibilities are negotiable. The position includes allowances for continuing education, conferences, insurance both malpractice and health, and sport event coverage. Please call for further discussion of this position.

Rajeev Puri, MD
Hip and Knee Replacement
Foot and Ankle Surgery
